The Math Wizard is a cost effective interactive mathematics instruction tool and learning resource. The software program can be used with any textbook or curriculum. The Math Wizard program can be used for classroom lectures when used in conjunction with a digital projector and/or a smart board. It is an excellent resource for preparing students for achievement tests, GED tests, high school graduation tests, college placement tests, remedial math programs, etc.

The software program is user friendly and has easy to follow and navigate command buttons, option buttons and drop down menus.

The software program is an effective intervention resource and is based not on a student's chronological age but rather on their math age (i.e., based on the student's math skill set.)

The Math Wizard contains almost 10,000 exercises and test bank questions including short answer and extended response exercises and questions. In addition, it is a comprehensive mathematics teaching resource that includes over 975 windows (i.e., a window in the program is like a page in a book), 350 interactive functions that can be used to solve problems from any source, over 100 common conversion tables and includes a life skills section including business math and budget planning tools.

The Math Wizard is an excellent resource from one on one tutoring of students that require special help (reactive) as well as gifted students that like to learn more than is covered in the daily lesson plans (proactive).

The major sections include:

Basic Math	Linear Algebra	Number Systems
Advanced Math	Quadratic Functions	Common Formulas
Decimals	Percents	Fractions
Distance-rate-time	Graphs and Tables	Geometry
Perimeter	Area	Volume
Trigonometry	Statistics	Test Banks
Business Math	Budget Planning	Common Conversions
Test Banks	Academic Content Standards	Practice OGT Tests

The software program allows teachers and parents to measure performance and track progress, and has a section that allows them to put in their own tests, up to 100 questions. The program scores the results.

The Math Wizard is an effective mathematics education resource for distance learning and home schooling programs and costs much less than the average mathematics textbook. The software program can run on any pc platform (NT, Windows 95 and 98, Windows 2000, and XP) as well as Apple O/S (8, 9, and X, Tiger or Panther.)
